Because surgical education matters

What is semilivesurgery.com?

ABOUT THE PLATFORM

semilivesurgery.com is a surgical training platform that uses multi-screen recordings of real procedures, captured without editing, to train surgeons as close to reality as possible.

Our original capture technique, the **mosaic recording™**, combined with the semilive player, lets you relive a surgical procedure by choosing your camera angle at any moment, inside a Zoom conference room accessible 24/7 from anywhere in the world.

Learners choose the procedure they wish to revisit and take full control of the playback using the **Remote**, at semilivecontrol.fr. At their own pace. With their peers.

Additionally, one or more sessions with the surgeon who performed the procedure can be scheduled to go further and ask questions during a **masterclass**.

MOSAIC™ RECORDING · FOUR SYNCHRONISED FEEDS, NO EDITING

Advantages

WHY SEMILIVE

Close to compagnonnage

The most widely used method in surgical teaching: learning alongside an experienced surgeon.

No ethical burden

None of the ethical problems or theatre disruption that live surgery sessions bring.

Freedom without the cost

Free choice of angle gives the freedom of far more complex systems such as VR.

Five steps, full control.

HOW IT WORKS

01

Create an account and access the platform

02

Enter the live Zoom meeting room and meet other surgeons

03

Open the Remote via semilivecontrol.fr

04

Drive the semilive case as you want, choose your angle at any moment

05

Choose another case from the catalogue and keep going

Mini-PCNL

CURRENT PROGRAMME

Steering committee

Dr Nadia Abid

Specialty

Urology

Cases available

7

This programme focuses on minimally invasive percutaneous nephrolithotomy (mini-PCNL), a cornerstone procedure in urological stone disease management. Through 7 real operative cases performed by Dr Nadia Abid, learners explore patient selection, access strategy, lithotripsy choice, and immediate post-operative decision-making across a broad spectrum of complexity.

N°	CASE	PT	STONE	TEACHING POINT
01	Staghorn-like stone, obstructive pyelonephritis	46 F	Lower calyx, Proteus mirabilis	Infected stone, two punctures
02	Large renal pelvis stone, high density	35 M	26 x 22 mm, ~1,600 HU	Encrusted mucosa, metabolic workup
03	Brushite recurrence, ulcerative colitis	54 M	Over 30 mm, 1,500-1,900 HU	Recurrence after 2023 mini-PCNL
04	Bilateral complete staghorn, stage 2	30 F	Bilateral staghorn, struvite	ECIRS dual approach, SWL for residuals
05	Chronic tetraplegia, Bricker conduit	67 F	25 x 30 mm renal pelvis	Retrograde access, scope compatibility
06	Massive staghorn, stage IIIB CKD	75 F	5 x 4 x 5 cm, atrophic kidney	Trilogy probe failures, switch to laser
07	Renal transplant, incidental calculus	42 M	11 mm graft calculus	Altered anatomy, retrograde then percutaneous

01 • CREATE AN ACCOUNT

Registration opens the programme sheets, the case sheets, the Remote and the Zoom room.

03 • ASK THE SURGEON

Leave a question about a case; it is stored and answered during the masterclass.

02 • VOTE FOR A WORKSHOP

Ask for a theme that has not been programmed yet, or flag your interest in one of the operations.

04 • CONTRIBUTE A CASE

Surgeons and departments can propose an operation for a mosaic™ capture in a coming programme.

TBD
2026

Mini-PCNL Masterclass with Dr Nadia Abid

Live Zoom session covering all 7 cases from the current programme. Open Q&A, technique discussion, and access strategy review. Date to be confirmed. Register your interest to be notified.

Questions

[FAQ](#)

Who is the platform designed for?

Surgeons in training and practising surgeons who want to deepen their technical knowledge through immersive, realistic case review, without the ethical and logistical constraints of live surgery observation.

How is semilive different from a standard surgical video?

Standard surgical videos are edited, single-angle, and passive. The semilive player gives you full temporal control and free choice of camera angle across a multi-screen mosaic recording: the closest equivalent to standing in the operating room, at a fraction of the complexity of VR systems.
